

Behavioural Based Safety

Objectives of the Course

The consensus among safety professional is that about 80 to 90 percent accidents in the work place may be attributable to human error or, in general terms, Behavioural Factors. This course will provide and outline the importance of understanding the role of Behaviour in improving safety and reducing accidents and injuries in the workplace.

The five day course will help the participants to assess existing safety initiatives and equip them with the day-to-day tools needed to raise your safety performance through a two—pronged approach of BBS and HSE Leadership.
